ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a composition for an artificial leather excellent in strength even without using a base substrate, also excellent in endurance and abrasion resistance, and having a touch and feeling resembling to a natural leather, and a high quality feeling.

SOLUTION: This composition for the artificial leather contains a thermoplastic elastomer selected from a urethane-based elastomer having a linear structure, and using a long chain diol as a soft

segment and a short  
chain diol with a diisocyanate as a hard segment, a vinyl  
chloride-based  
elastomer, a styrene-based elastomer, an olefin-based  
elastomer, a  
1,2-polybutadiene-based elastomer, a polyester-based  
elastomer, a  
polyamide-based elastomer, an ionomer- based elastomer and  
a fluorine-based  
elastomer, with a silk powder. The artificial leather is  
produced by molding  
the above composition for the artificial leather.

BASIC-ABSTRACT:

NOVELTY - Composition for artificial leather contains a thermoplastic elastomer and powdered silk.

DETAILED DESCRIPTION - The thermoplastic elastomer is selected from a linear structure-urethane-based elastomer using a long-chain diol as a soft segment and a short-chain diol and diisocyanate as a hard segment, a vinyl chloride-based elastomer, a styrene-based elastomer, an olefin-based elastomer, a 1,2 polybutadiene-based elastomer, a polyester-based elastomer, a polyamide-based elastomer, an ionomer-based elastomer and a fluorine-based elastomer.

USE - The composition is used for the artificial leather.

ADVANTAGE - The artificial leather has superior strength without using a base material, durability, abrasion resistance, moisture absorption and release, feeling.
